

The compact multi-currency banknote counter and fitness sorter

Key Nvision benefits

More money for your money

Two full-stacking pockets = higher productivity through less manual intervention. A better solution than a simple reject pocket

More speed from the feed

Nvision uses the proven  continuous feed technology with higher processing speeds and a smoother operation

More fit for purpose

Nvision's unique array of detection and authentication technologies combine to meet the wide criteria of 'condition' that deems a note unfit

More ups, less downs

A new bladed note diverter reduces incidence of note jams and a stainless steel transport area reduces static, a major contributor to feeding problems. Nvision's robust full metal chassis is more durable and its side-mounted PCB keeps expensive and vulnerable electronic components protected and away from the note processing path

More intuitive and easier to use

A customisable, multilingual and menu-driven user interface make Nvision simple to operate

More flexible and accommodating

Nvision is compact and portable. Nvision can be moved and sited almost anywhere. Its smooth operation means it's less intrusive to the environment around it
